

## Japanese Painted Fern (*Athyrium niponicum* 'Pictum')

An herbaceous perennial with moderate growth up to 18-24 inches tall and wide. The blue-green fronds have a dark center and fades to silver at the edges. The short and spreading form make this an excellent plant for foreground placement in the garden.

**Plant Care:** This fern prefers partial to full shade and rich, composted soil.

**Watering:** Regular watering will help keep the soil evenly moist, but must be well-drained to prevent root rot.
