

## Oso Easy Paprika Rose (Rosa x 'ChewMayTime')

Oso Easy Rose is one of the easiest roses you can grow. It is a small shrub, which grows 2 feet tall and 1-2 feet wide. It blooms continually from summer through fall.

**Plant care:** Plant Oso Easy likes at least 6-8 hours of full sun. Remove spent flowers to encourage reblooms. Remove and destroy diseased leaves from plants. The only pruning it needs is cutting back to about half of its size each spring. Applying granular fertilizer formulated for roses in early spring will help it grow and flower.

**Watering:** Give it extra water its first year and average water thereafter. Avoid overhead watering.
